MY-Hack Project Submission Template

- **Who will benefit the most from this project?**
  Replace this with your answer. One line answer.
- **What inspired you to work on this project?**
  Replace this with your answer. One line answer.
- **What it does?**
  Replace this with your answer. 300 chars max.
- **How you build it?**
  Replace this with your answer. 300 chars max.
- **What challenges you experienced?**
  Replace this with your answer. 300 chars max.
- **Accomplishments that you're proud of?**
  Replace this with your answer. 300 words max.
- **What have you learned?**
  Replace this with your answer.
- **What have you used?**
  Link the gadgets you used to build your products
- **What have you created?**
  Link your repository of codes, apps etc.

Inspiration

Social media is only becoming more prevalent in our lives, and many of these sites have been designed to prey on our mind's vulnerabilities. Since teenagers and young adults are the most susceptible to the negative effects of social media and many don't receive help in navigating them, we decided to make a website to do just this.

What it does

Our website includes a Journals page that lets users connect with others who also want to have conversations about social media and mental health, a Resources page that aims to raise awareness about this issue through videos and other helpful links, and a Let's Talk page that includes a chatbot that will give guidance to users in dealing with their mental health problems and answer questions relating to the site's mission.

How we built it

We coded the website using HTML and CSS on repl.it and created our logo using Canva.

Challenges we ran into

Our main challenges were not have been able to finish adding the friend locator or chatbot to our website.

Accomplishments that we're proud of

We are proud of having come up with a concept that addresses an important problem in the lives of teenagers and young adults. We are also proud of having created our website within the tight deadline of 24 hours.

What we learned

We learned how to create a pretty looking logo using Canva and incorporate it into our website.
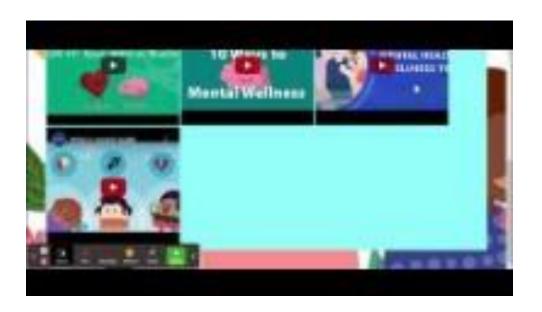

What's next for Sociental

Next, we want to finish creating the friend locator and chatbot features of Sociental.

Built With

canva   css   html   repl.it

Try it out

Safe navigation to shield against the negative effects of social media
